CASE STUDY

HITME.PL

EMAIL SECURITY IN THE CLOUD OR ON-PREMISES

INCOMING » OUTGOING » ARCHIVING

Local Cloud » SaaS Managed Email Security in the cloud » Incoming Filter » Email Archiving » API » Clusterable » Synchronized » Scalable

As days pass, spammers and botnets are becoming highly creative and efficient, improving their software and malware mechanics to expertly get inside networks. Only a constantly improved solution that relies on a huge data intelligence set to analyze trends can effectively protect users from unsolicited email. SpamExperts' professional email filtering stops any spam, virus and malware threats with an accuracy rate of 99.98% and a false-positive rate of less than 1 in a million.

Quick Read

HitMe.pl was founded at the dawn of 2008 and was the first Web Host service in the Poland region to provide huge offerings of Virtual Private Servers. The company now includes shared and dedicated hosting, colocation, SSL certificates, VPN solutions, private cloud and much more. With servers in the Gdańsk NEPHAX Data Center, HitMe.pl ensures cloud computing's most powerful and stable components.

Challenges

Before acquiring a SpamExperts Local Cloud & Incoming Filter subscription for 5,000 domains, spam was a huge nuisance for HitMe.pl as customers were receiving loads of junk emails, many with cryptolockers and phishing content. At that time, the Poland-based company was using an in-house developed solution paired with the open-source SpamAssassin and implementing RBL filters on the network firewall. In spite of their efforts, unwanted mail still came through.

Customer profile

Company	HitMe.pl
Location	Poland
Industry	Web Hosting
Number of filtered domains	5,000 domains Incoming
Products in Use	Local Cloud, Incoming Filter, Email Archiving
Website	www.hitme.pl

Implementation

In April of 2016, after scouring the internet for email security suites and considering recommendations from industry friends, HitMe.pl found SpamExperts to better fit their Web Host needs. Shortly after testing the Incoming Filter service, the company extended usage and upgraded to 5,000 domains on the Local Cloud. The on-premises solution is beneficial to the business as it easily gets rid of spam troubles.

“We tried the do-it-yourself way, but it didn’t work. We don’t want to spend valuable resources on constructing our own antispam gateway when there’s SpamExperts, basically, protecting our users from e-criminals. We wanted a working solution, and we got it,” says Hubert Nodzak-Pluta, SysAdmin at HitMe.pl.

Benefits

SpamExperts provides relentless filtering software that catches unwanted email before it even reaches the company server, thus ensuring a clean inbox, enabling the user to focus on other important business-related tasks.

Target Reached

“We got what we were looking for - no more spam, more time for our admins to take care of systems, and happy customers. We’re also pondering on acquiring a new subscription for our outbound traffic in the near future. Considering the quality service and software that SpamExperts provides, it would benefit us tremendously,” states Hubert.
